PROMPT ENGINEERING OS V3.2

The Prompt Master Playbook

A curated collection of award-winning prompts, frameworks, and quick tips from the promptc OS project. Hand-picked for maximum impact.

47+	21	66	6
MODIFIERS	WORKFLOWS	SKILLS	ZONES

CHAPTER 01

The 6-Zone Operating System

promptc OS is organized into six interconnected zones, each serving a distinct purpose in the prompt engineering lifecycle. Think of it as an operating system for your AI interactions, from activation to monetization.

⚡ ACTIVATE	🏗 BUILD	✅ VALIDATE	📋 PLAYBOOK	💰 MONETIZE	🔄 SYSTEM

⚡ Activate Zone

Your launchpad. Contains 8 ready-to-use task prompts (YouTube, Coding, Business, Research, UI/UX, Image AI, Copy, Email), 47 modifiers across 9 categories, 20 templates, 6 brand systems, and the 7-animal thinking framework. Every prompt here is copy-ready — paste directly into any AI.

🏗 Build Zone

The engineering lab. Houses the Master Prompt (your AI's core operating instructions), 8 advanced enhancement techniques including Self-Refinement Loop and Chain-of-Thought, and a 3-tier Meta Prompt system (Quick Critique, Structured Analysis, Expert Engineering). This is where raw prompts become production-grade.

✅ Validate Zone

Quality assurance for prompts. Features 28 lint rules across 5 segments (Universal, UI/UX, Code, Content, Agent), 40+ word swaps from beginner to hack level, 60+ design vocabulary terms, and a Quality Score system that evaluates clarity, specificity, structure, and actionability on a 1-10 scale.

📋 Playbook Zone

The strategy library. Contains 21 production workflows (Design, Dev, Business, Mobile, AI/ML, Content, Security, DevOps), 6 animal chain combinations for complex problem-solving, 12 design combos, and 4 typography pairings. Each workflow comes with a complete, copy-ready prompt.

8	47	21	20	40+
TASK PROMPTS	MODIFIERS	WORKFLOWS	TEMPLATES	WORD SWAPS

CHAPTER 02

The Master System Prompt

Every great AI interaction starts with a great system prompt. This is the foundation that transforms any AI from a generic assistant into a focused, high-output partner. Copy this once, paste it at the top of any conversation, and watch the quality difference immediately.

★ EDITOR'S PICK — #1 MOST IMPACTFUL PROMPT

Use this as your default system prompt for every new AI conversation. It establishes advocacy mode, eliminates filler, and forces working code. The 10 core rules alone will save you hours of back-and-forth.

THE MASTER PROMPT — COPY READY

```
You are my expert AI assistant, business partner, and creative strategist.
Act in MY best interest — identify what I truly need, not just what I asked.

CORE RULES:
1. No filler. No fluff. No disclaimers.
2. Give WORKING code only — never pseudocode.
3. Rank ideas by impact — not just list them.
4. Always flag a better/faster way if one exists.
5. Default to expert-level unless told otherwise.
6. Vague request? Assume smartly, state it, proceed.
7. Something risky? Flag it — then do it anyway unless I say stop.
8. Never ask me to repeat context from this conversation.
9. Format for scanability: headers, bullets, bold key points.
10. End every complex answer with ⚡ Recommended Next Step.

ADVOCACY MODE:
- Warn me before I make a mistake.
- Suggest better approaches even when I didn't ask.
- Optimize for my long-term success — not just the task.
- Push back if you have a strong reason.
- Quality over speed — always.

WRITING RULES:
- Short sentences. Every word earns its place.
- Simple language — 4th grade reading level.
- One idea per sentence. Make it digestible.
- Think deeply. Write clearly. Let ideas lead.
```

The Advocacy Mode

This companion prompt transforms your AI from a passive responder into an active advisor. It gives the AI permission to push back, warn you about mistakes, and optimize for your long-term success rather than just completing the immediate task. When combined with the Master Prompt, it creates a powerful partnership dynamic.

ADVOCACY MODE — COPY READY

```
For this entire conversation, I want you to be my advocate, not just my assistant. That means:
- If I'm about to make a mistake, warn me.
- If there's a better approach, tell me even if I didn't ask.
- Optimize for MY long-term success, not just completing the immediate task.
- If something I ask for could hurt my project, business, or goals, flag it.
- Prioritize quality over speed unless I say otherwise.
- I give you permission to push back on my ideas if you have a good reason.
```

Quick Tip: How to Use These Together

Paste the Master Prompt first as your system instructions. Then paste Advocacy Mode right after it. Now every response will be filtered through expert-level standards with an active advisory lens. This combination alone eliminates 80% of common AI output problems: filler text, hedging, incomplete code, and generic advice.

CHAPTER 03

Top 10 Quick-Fire Modifiers

Modifiers are single-line additions that dramatically change AI output quality. Append any of these to the end of your prompt. Each one is battle-tested and comes with a pro tip explaining exactly when and why to use it.

MODIFIER	CATEGORY	PRO TIP
"think step by step before answering,"	Reasoning	Triggers chain-of-thought — measurably improves complex reasoning by forcing the AI to decompose the problem before responding.
"give me the 80/20 version,"	Speed	Highest-leverage change. Add "don't explain what you cut" to get pure signal with zero filler.
"what am I missing or not asking that I should be?"	Strategy	The #1 blind spot revealer. Use at the end of strategy sessions to uncover hidden risks and opportunities.
"find the flaw in this reasoning first,"	Reasoning	Best adversarial prompt. Use before presenting plans to stakeholders to pre-empt criticism.
"give me 3 wildly different approaches,"	Output	Breaks the average-output trap. Forces creative divergence before committing to one direction.
"cite your confidence level 1-10 per claim,"	Reasoning	Separates facts from speculation. Essential for research, analysis, and any decision-support prompt.
"what's the fastest path to first dollar?"	Strategy	Cuts scope creep on product builds. Revenue-first filter for every business idea or feature request.
"you are a staff engineer doing a code review,"	Role	Gets security, scale, and edge-case concerns automatically — no need to ask for them separately.
"give me a checklist I can follow without re-reading this,"	Productivity	Converts explanations into executable checklists. Best for implementation guides and SOPs.
"identify second-order effects,"	Reasoning	Forces systems thinking beyond the immediate solution. Reveals unintended consequences early.

HOW TO STACK MODIFIERS

Combine 2-3 modifiers for compound effect. Example: **"think step by step" + "give me 3 wildly different approaches" + "cite your confidence level 1-10"** — this forces structured reasoning, creative divergence, and honest uncertainty quantification in a single prompt.

Modifier Categories at a Glance

ROLE	OUTPUT	REASONING	SPEED	STRATEGY
5	7	6	5	5

CHAPTER 04

8 Copy-Ready Task Prompts

These are complete, production-ready prompts. Paste any of them into your AI and replace the bracketed section with your specific context. No modification needed — they work as-is.

💻 Senior Coding Engineer

```
TASK: CODING — COPY READY

You are a senior software engineer and architect.
When I describe a feature, always:
- Ask clarifying questions ONLY if something is truly ambiguous
- Write production-ready code, not demo code
- Add error handling automatically
- Explain the "why" behind any non-obvious decision in a single comment
- Flag performance or security concerns before I ask
```

✍️ Direct-Response Copywriter

```
TASK: COPY — COPY READY

You are a direct-response copywriter. When I give you a brief:
- Lead with the reader's pain, not the product's features
- PAS framework: Problem → Agitation → Solution
- 8th grade reading level. One idea per sentence.
- Every headline passes the "so what?" test
- Specific CTA: name the action AND the benefit
- No corporate speak. No passive voice.

Brief: [describe what you need]
```

📸 AI Image Prompt Engineer

```
TASK: IMAGE AI — COPY READY

You are an expert AI image prompt engineer. Build the prompt in layers:
1. SUBJECT: who/what, pose, expression, action
2. LENS: camera body, lens mm, aperture, focal technique
3. LIGHTING: key light, fill ratio, color temp, modifiers
4. ENVIRONMENT: location, time of day, weather, atmosphere
5. RENDER: film stock or engine, color grade, post style
--ar [ratio] --style raw --v 6.1 --q 2

Subject: [describe here]
```

📊 Business COO

```
TASK: BUSINESS — COPY READY

Act as my COO and strategist. When I describe a problem or goal:
- Identify the fastest path to results (the 80/20 solution)
- Separate what I MUST do from what is optional
- Give me a prioritized action plan, not just advice
- Tell me what successful people in this space actually do, not just theory
```

📧 Email Sequence Creator

```
TASK: EMAIL — COPY READY

You are an email marketing specialist. Create a 5-email sequence:
1. Welcome: hook + what they get + one quick win
2. Value: teach something genuinely useful (no pitch)
3. Case study: before, after, specific numbers
4. Objection: address the #1 reason people don't buy
5. Offer: clear, specific, time-aware CTA

Each email: Subject line + Preview text + Body (max 300 words)
Product: [describe] | Audience: [who] | Goal: [action]
```

Also available: YouTube Growth Strategist, UI/UX Designer, Research Assistant — all equally copy-ready with the same depth of specificity.

CHAPTER 05

The 7-Animal Thinking System

Each animal represents a distinct cognitive mode. Type your idea or problem, select an animal, and get a completely different perspective. Combine multiple animals for breakthrough insights that no single perspective could produce alone.

🐇

Rabbit

MULTIPLY IDEAS

Takes one idea and generates 10 distinct variations by changing angle, audience, and format. Perfect for brainstorming sessions and content ideation.

🦉

Owl

DEEP ANALYSIS

Slow, observant, analytical. Examines from multiple perspectives and identifies hidden factors that most people overlook. For complex decisions.

🐜

Ant

BREAK INTO STEPS

Breaks any goal into the smallest realistic steps. Turns overwhelming projects into manageable daily actions. For execution planning.

🦅

Eagle

BIG PICTURE STRATEGY

Views from above. Explains long-term strategy and how all pieces connect. For strategic planning and vision alignment.

🐬

Dolphin

CREATIVE SOLUTIONS

Curious, playful, inventive. Generates creative solutions that most people would not normally consider. For innovation and problem-solving.

🦫

Beaver

BUILD SYSTEMS

Designs practical, step-by-step systems that solve problems methodically. For SOPs, automation, and process design.

🐘

Elephant

CROSS-FIELD CONNECTIONS

Connects ideas to insights from other fields such as psychology, economics, science, or history. Leverages the power of analogical thinking to find solutions that domain experts would miss entirely.

Animal Chains — Combined Power

When one animal is not enough, chain them together for compound thinking. Here are the hand-picked combinations for specific goals:

GOAL	CHAIN	BEST FOR
Build AI Content System	🦅 Eagle → 🦫 Beaver → 🐜 Ant	Automated content pipelines
Solve Complex Problem	🦉 Owl → 🐬 Dolphin → 🐘 Elephant	Product design, breakthroughs

GOAL	CHAIN	BEST FOR
Brainstorm Product	🐇 Rabbit → 🦅 Eagle → 🐜 Ant	Product ideation, channels
Design Workflow	🦫 Beaver → 🐜 Ant → 🦉 Owl	Automation scripts, SOPs
Generate Viral Content	🐇 Rabbit → 🐬 Dolphin → 🦅 Eagle	Social media, campaigns
Validate Business	🦉 Owl → 🐘 Elephant → 🦅 Eagle	Startup validation, venture

CHAPTER 06

The 8-Layer Mega Prompt Framework

This is the complete architecture for building production-grade prompts. Each layer addresses a specific failure mode. Miss one, and your prompt produces generic output. Use all eight, and your results will be measurably superior to 99% of prompts people write.

1 **Role** Who the AI acts as → 2 **Context** Product, audience → 3 **Objective** Success criteria → 4 **Constraints** Quality guardrails → 5 **Aesthetic** Visual / tone

6 **Planning** Reason first → 7 **Output** Exact format → 8 **Refinement** Self-critique

LAYER	PURPOSE	IF YOU MISS IT
01 Role	Who the AI acts as — expertise, seniority, perspective	Generic, shallow responses
02 Context	Product, audience, platform, existing constraints	Misaligned output
03 Objective	One clear sentence of what success looks like	Aimless generation
04 Constraints	Quality guardrails: mobile-first, WCAG AA, 60fps	Mediocre, unconstrained output
05 Aesthetic	Design language, tone, brand alignment keywords	Visually dull or off-brand
06 Planning	Architecture before generation — information hierarchy	Structural mistakes
07 Output	Exact format: files, schema, structure specified	Incomplete or disorganized output
08 Refinement	Self-critique before final — two polish passes	First-draft quality only

★ EDITOR'S TIP — THE 80/20 OF THIS FRAMEWORK

If you only apply three layers, make it these: **Role** (set expertise), **Constraints** (set quality floor), and **Output** (set exact format). These three eliminate 80% of common AI failures: generic responses, unbounded output, and wrong format. Add the other five when quality truly matters.

CHAPTER 07

8 Advanced Enhancement Techniques

These techniques transform good prompts into exceptional ones. Each addresses a specific quality problem and includes a ready-to-use template you can append to any prompt.

🏆 #1: Self-Refinement Loop

```
HIGHEST IMPACT ENHANCEMENT — APPEND TO ANY PROMPT

After generating your first draft, do NOT show it.
Instead:
1. Critique it — is it generic? Does every section earn its place?
2. Refine once for structure — cut anything that doesn't serve the goal.
3. Refine once for polish — fix inconsistencies, improve specificity.
Output the final version only. No commentary, no "here's the refined version".
```

#2: Chain-of-Thought

```
FOR COMPLEX REASONING — ADD BEFORE YOUR REQUEST

Let's think step by step. Before answering:
1. Identify what type of problem this is.
2. List the key constraints and unknowns.
3. Consider 2-3 approaches.
4. Select best approach — explain why in one sentence.
Then answer.
```

#3: Role + Constraint Stack

```
BIGGEST QUALITY MULTIPLIER PER WORD ADDED

You are a [senior staff engineer] who has shipped [3 production systems handling 10M+ users].
You write for [practitioners], not beginners.
Prioritize [correctness] over [brevity]. No pseudocode. No TODOs. Full error handling.
Never suggest multiple approaches — pick the best one and commit.
```

#4: Zero-Shot CoT

```
SIMPLEST QUALITY HACK — ONE LINE

Think carefully before answering. Show your reasoning.
```

#5: Prompt Diff (A/B Testing)

BEFORE DEPLOYING PROMPTS TO PRODUCTION

```
Compare these two prompts. For each, score 1-10 on:
Clarity · Constraints · Predictability · Specificity

Prompt A: [paste prompt A]
Prompt B: [paste prompt B]

Output:
1. Scores table
2. Which performs better and why (2 sentences)
3. Rewrite of the weaker prompt
```

PRO TIP: ENHANCEMENT STACKING ORDER

Always apply enhancements in this order: (1) Role + Constraint Stack first (sets the quality floor), (2) Chain-of-Thought second (improves reasoning), (3) Self-Refinement Loop last (polishes output). Adding Self-Refinement without Chain-of-Thought works, but the reverse order is less effective.

CHAPTER 08

6 Complete Brand Design Systems

Each brand system is a production-ready prompt that generates a complete design language: color palette, typography, motion, copy rules, and UX constraints. Copy the one matching your project type and paste it into any AI for instant brand consistency.

BRAND	USE CASE	KEY PRINCIPLES
✨ **powerUP**	Motivational, Creator, Personal Brand	Dark-mode native, typography-first, one accent per screen, white space = intelligence
💼 **SaaS / B2B**	SaaS Platform, Enterprise Tool	Function before form, information hierarchy, mobile-first, WCAG AA minimum
🛒 **E-commerce**	Retail, DTC Brand, Marketplace	CTA above fold, price visible always, checkout in 3 steps max, thumb-zone CTAs
💰 **Fintech**	Finance, Banking, Investment App	Green = gain ONLY, Red = loss ONLY, tabular-nums mandatory, minimal motion
🛡 **Insurance**	Insurtech, Benefits Platform	Plain language over jargon, 3-step quote flow, claims tracking like packages
🎨 **Creative Agency**	Design Studio, Production House	Work leads over UI, whitespace is design, every hover tells a story

★ MOST VERSATILE: THE POWERUP BRAND

Start here. The powerUP system works for almost any creative or personal project. Its dark-mode native approach with sparse neon accents creates an immediately premium feel. The typography-first design rule ("type does the work, effects support") prevents the most common design mistake: over-decoration.

powerUP Brand — Color Palette

BRAND ESSENCE — COPY READY

```
Brand essence: Activated potential. Directed energy. Intelligent lift.

COLOR PALETTE
- Background: #0B0D10 (void black), #14161A (charcoal)
- Accents (sparse): cyan #4DFFFF · violet #7B5CFF · magenta #FF4FD8 · amber #FFB000
- Text: #FFFFFF (primary) · #A1A1AA (secondary) · #6B7280 (muted)

MOTION: Bias always upward. cubic-bezier(0.16, 1, 0.3, 1). Duration: 180ms micro, 320ms standard.
DESIGN RULES: Typography-first, dark-mode native, one accent per screen, white space = intelligence.
TONE: Confident. Modern. Calm. Inevitable.
AVOID: over-decoration, excessive gradients, visual noise, SaaS clichés.
```

Fintech Critical Rule: NEVER use red for branding. NEVER use green decoratively. Green means gain. Red means loss. This semantic color coding is non-negotiable in financial interfaces — it prevents catastrophic user confusion.

CHAPTER 09

The Word Swap Quick Reference

The single fastest way to improve any prompt: replace vague words with specific terms. These swaps are organized from beginner to hack level. Each one comes with a rationale explaining why the replacement is better.

Beginner Swaps — Fix These First

❌ SAY THIS	✅ SAY THIS INSTEAD	WHY
"nice"	"clear and intentional"	Specificity forces AI to make design decisions
"modern"	"glassmorphism / neo-brutalism"	"Modern" means nothing to an AI
"beautiful"	"visually precise with intentional contrast ratio"	Beauty is subjective. Contrast ratio is measurable
"responsive"	"fluid grid at 375/768/1280/1920px breakpoints"	Name the breakpoints or it's guesswork
"fast"	"LCP <2.5s, CLS <0.1, FID <100ms"	Web Vitals are the universal standard

Advanced Swaps — Precision Level

❌ SAY THIS	✅ SAY THIS INSTEAD	WHY
"smooth animation"	"cubic-bezier(0.16,1,0.3,1) 320ms spring easing"	Spring easing feels physical
"glassmorphism"	"backdrop-filter:blur(20px), rgba(255,255,255,0.06), border:1px solid rgba(255,255,255,0.12)"	Specify all three properties
"good typography"	"modular scale 1.25, line-height 1.6 body / 1.1 display, clamp() for fluid sizing"	Modular scale creates harmony
"interactive"	"hover 150ms ease-out, press 80ms scale(0.97), focus-visible 2px ring offset-2"	Spec all three states consistently

Hack-Level Swaps — Expert Precision

❌ SAY THIS	✅ SAY THIS INSTEAD	WHY
"write good copy"	"hook (problem) → agitation → solution → proof → CTA"	PAS framework converts better
"secure it"	"input validation (zod), parameterized queries, CORS, rate limiting, JWT rotation"	Security is a checklist
"make it faster"	"profile first: measure LCP, TTFB, JS execution — then optimize bottleneck only"	Profile before you optimize
"make it scalable"	"stateless functions, horizontal scaling, read replicas, CDN, queue for async"	Scalability is architecture

CHAPTER 10

Top 5 Production Workflows

These workflows are complete, step-by-step prompt systems for building real products. Each one addresses a specific use case and includes all the context, constraints, and output format needed. Copy-paste and replace bracketed sections.

🎨 Design System Creation

```
WORKFLOW: DESIGN — FULL PRODUCT DESIGN SYSTEM

Create a comprehensive design system for [product]. Include:
- Color palette (primary, secondary, neutral, semantic)
- Typography scale (4 levels)
- Spacing system (4px grid)
- Component library (buttons, inputs, cards, modals)
- Icon set guidelines
- Documentation structure
Output as structured markdown with code tokens for values.
```

💻 Full-Stack Application

```
WORKFLOW: DEV — COMPLETE WEB APPLICATION

Build a complete [app type] with:
- Next.js 15 frontend, REST API with validation
- PostgreSQL database schema (3-5 core tables)
- Authentication (OAuth + JWT)
- CRUD operations for all models
- Responsive UI with Tailwind CSS
- Error handling, loading states
- Deployment config for Vercel
```

🤖 AI Agent Design

```
WORKFLOW: AI — AUTONOMOUS AGENT SYSTEM

Design an autonomous AI agent for [task]. Include:
- Agent architecture (ReAct / Plan-and-Execute)
- Tool definitions (5-8 tools with schemas)
- Memory system (short-term + long-term)
- Error recovery strategy
- Human-in-the-loop checkpoints
- Evaluation metrics
- Deployment plan with fallback mechanisms
```

📊 Market Research Report

```
WORKFLOW: BUSINESS — COMPREHENSIVE MARKET ANALYSIS

Conduct market research for [industry/product]. Include:
- TAM/SAM/SOM analysis
- 5 key competitor profiles with SWOT
- Target user personas (3 segments)
- Pricing benchmarking
- Market trends (3 key trends)
- Barriers to entry assessment
- Go-to-market recommendation with timeline
```

🔒 Security Audit

```
WORKFLOW: SECURITY — FULL APPLICATION REVIEW

Perform a security audit for [application type]. Include:
- OWASP Top 10 checklist
- Authentication vulnerability assessment
- Input validation review
- Data exposure risks
- API security headers
- Dependency vulnerability scan approach
- Incident response plan
- Security hardening recommendations
```

16 more workflows available in the Playbook Zone covering: Landing Page Design, API Design, Database Schema, Product Roadmap, Pricing Strategy, Competitive Analysis, Content Strategy, Email Sequence, Social Media Strategy, User Onboarding, Dashboard Design, Mobile App Design, React Native Build, ML Pipeline, CI/CD Pipeline, and Monitoring Setup.

CHAPTER 11

Monetize: Turn Prompts Into Profit

The Monetize Zone is not just theory — it contains actionable templates, real SaaS blueprints, and income stack strategies. Here are the hand-picked highlights for generating real revenue from prompt engineering skills.

Top 6 Profit Prompts

PROMPT	DESCRIPTION	REVENUE
SaaS AI MVP in 1 Weekend	Build complete SaaS with Next.js + Supabase + Groq + Stripe + Vercel	$$$
Prompt Pack → First Sale in 48hrs	10 copy-ready prompts for Gumroad with niche, title, pro tip	$
Newsletter → $1k/mo in 90 Days	Beehiiv + referral program + sponsorships content system	$$
Consulting → Productized Offer	Fixed-scope, fixed-price with Notion portal + Loom async delivery	$$
Agency → SaaS Transition	6-month plan from services to product	$$$
MCP Tool → Paid Product	Build MCP server for Claude Desktop, monetize with npm/Stripe	$$$

The Income Stack Framework

$100-500
WEEK 1 — QUICK WIN

$500-5k
WEEK 2-4 — ACTIVE

$500-10k/mo
MONTH 1-3 — PASSIVE

$2k-20k/mo
MONTH 2-6 — HYBRID

SaaS Templates That Ship

TEMPLATE	STACK	DIFFICULTY	TIME
AI Content Pipeline	n8n + Airtable + WordPress	Medium	2-3 days
Lead Capture & Qualification	n8n + Typeform + OpenAI + HubSpot	Hard	5-7 days
Site & Competitor Monitor	n8n + PagerDuty + Google Sheets	Easy	1 day
Invoice Automation	Make + Airtable + PDF.co + Gmail	Medium	2-3 days
MCP Agent Pipeline	MCP SDK + Node.js + WordPress	Hard	7-10 days
CRM Sync System	Zapier + HubSpot + Gmail + Sheets	Easy	1-2 days

★ FASTEST PATH TO REVENUE

Sell a prompt pack on Gumroad. Create 10 prompts, price at $9-19, write a compelling product description using the Copy task prompt from this book, and set up a simple landing page. Zero setup cost. First sale within 48 hours is achievable with the right niche selection.

CHAPTER 12

The Skills Library: 66 Powers

promptc OS integrates with a library of 66 production skills across 13 categories. Each skill can be invoked independently or combined for compound effects. Here is the full breakdown of capabilities available at your fingertips.

9	8	5	4	5	3
AI / LLM CORE	WEB SEARCH	DOCUMENT GEN	PROMPT ENG	WEB DEV	ANIMATION

6	7	4	5	1	4
CONTENT	BUSINESS	AGENT	ANALYSIS	DATA VIZ	UTILITIES

Must-Know Skills

SKILL	CATEGORY	WHAT IT DOES
LLM	AI / LLM Core	Chat completions via z-ai-web-dev-sdk for conversational AI
VLM	AI / LLM Core	Vision-based AI chat for image understanding and analysis
image-generation	AI / LLM Core	AI image creation from text descriptions (multiple sizes)
web-search	Web Search	Real-time web search for current information retrieval
docx	Document Gen	Word document creation and editing (85 files, most comprehensive)
pdf	Document Gen	PDF generation with cover, TOC, charts, and forms
fullstack-dev	Web Development	Next.js 16 + TypeScript + Tailwind CSS 4 full-stack apps
ui-ux-pro-max	Web Development	UI/UX design intelligence and implementation guidance
skill-creator	Skill Management	Create, modify, evaluate, and benchmark skills
charts	Data Visualization	Charts via matplotlib, ECharts, D3.js, and Mermaid
mcp-builder	Agent Frameworks	MCP server builder for Claude Desktop integration
chain-of-thought	Prompt Eng	Chain-of-thought reasoning for complex problem-solving

SKILL COMBINATIONS THAT COMPOUND

Research + docx + charts → Generate a market research report with embedded data visualizations. **LLM + web-search + pdf** → Build an AI-powered research assistant that outputs structured PDF reports. **image-**

generation + fullstack-dev → Create a web app that generates images on demand. Skills compound like interest — each one makes the system smarter.

CHAPTER 13

Design Vocabulary Quick Reference

60+ terms that transform vague design requests into precise, AI-understandable instructions. Use these exact terms in your prompts for dramatically better visual output. Each includes the CSS or implementation detail.

Visual Effects (Top Picks)

TERM	IMPLEMENTATION	PRO TIP
glassmorphism	backdrop-filter:blur(20px) + rgba fill + 1px border	Pair with colorful background behind it
neo-brutalism	Thick black borders, flat fills, hard drop shadows	Works best monochromatic
bento grid	Asymmetric mosaic, cards spanning multiple columns	Gap consistency is the only rule
neon accent	Single saturated color against void-black	One accent per screen maximum
dark-mode native	Designed dark-first, light mode is adaptation	Elevation changes: higher = lighter
claymorphism	Inflated 3D soft shapes, multi-layer inner shadows	inner-shadow: inset 0 -6px 12px is the key

Motion & Interaction (Top Picks)

TERM	IMPLEMENTATION	PRO TIP
spring physics	Framer: type:'spring', stiffness:400, damping:30	High stiffness + low damping = snappy
micro-interactions	Sub-200ms feedback on every state change	Every interaction needs a state
skeleton loading	Animated shimmer matching exact content shape	Must mirror real content dimensions
scroll-trigger	GSAP ScrollTrigger or Framer viewport prop	GSAP: start:'top 80%' end:'top 20%'
variable font	font-variation-settings: 'wght' 100 to 900	One file, infinite styles

Layout & System (Top Picks)

TERM	IMPLEMENTATION	PRO TIP
8pt grid	All spacing is a multiple of 8px	4px tight, 8px gaps, 16/24/32/48/64px layout
fluid typography	clamp(min, fluid, max) for scalable sizes	Eliminates typography breakpoints
container queries	@container (min-width: 400px)	True component-level responsiveness
editorial layout	Magazine-style: oversized type, text-image overlap	Break the grid intentionally
data storytelling	Sequence charts + annotations to guide viewer	Start with insight in the title

PROMPTC OS V3.2

Start Building Better Prompts Today

47 modifiers. 21 workflows. 66 skills. 6 brand systems. Every single one is copy-ready.

promptc-os.vercel.app

Built with Next.js 16 · TypeScript · Tailwind CSS · Framer Motion

2026 Edition — promptc OS Project by Mark Tantongco
